1 IMPORTANT

(1) Hold LOCK button on keypad while (2) inserting the battery pack into the interior. The lock will extend & retract deadbolt latch. Hold down the lock button until you hear two beeps (approx. 30 seconds).
### Programming

![Diagram of Programming](image)

#### How the keypad works

Each button represents two numbers (i.e. 1 and 2 for the first button).

You only need to push the button once to get either 1 or 2.

For example: If your code is 1-2-5-6-8.

<tr>
<td><img src="image" alt="Enter 4 to 8 Digit Code" /></td>
<td><img src="image" alt="Enter 4 to 8 Digit Code" /></td>
</tr>
<tr>
<td><img src="image" alt="Press Lock Button" /></td>
<td><img src="image" alt="Press Lock Button" /></td>
</tr>
</tbody>
</table>

**Check code—press LOCK button & test code. If the code does not work, repeat the program step.**

⚠️ **CAUTION:** Prevent unauthorized entry. This lock can be opened using two different codes that are randomly set at the factory. Upon installation and set-up, replace both of these codes with your own. Since anyone with access to the power board can change these codes, you must restrict access to the power board and routinely check both codes to assure they have not been altered without your knowledge.
